1)
Among the following identify the one in which dimensionality reduction reduces.
a) Performance
b) statistics
c) Entropy
d) Collinearity

Answer is- d) Collinearity

2) Which of the following machine learning algorithm is based upon the idea of bagging?
a) Decision Tree
b) Random Forest
c) Classfication
d) SVM

Answer is- b) Random Forest

3) Choose a disadvantage of decision trees among the following.
a) Decision tree robust to outliers
b) Factor analysis
c) Decision Tree are prone to overfit
d) all of the above

Answer is- c) Decision Tree are prone to overfit

4)
What is the term known as on which the machine learning algorithms build a model based on sample data?
a) Data Training
b) Sample Data
c) Training data
d) None of the above

Answer is- c) Training data

5)
Which of the following machine learning techniques helps in detecting the outliers in data?
a) Clustering
b) Classification
c) Anamoly detection
d) All of the above

Answer is- c) Anamoly detection

6)Identify the incorrect numerical functions in the various function representation of machine learning.
a) Support Vector
b) Regression
c) Case based
d) Classification

Answer is- c) Case based

7)

Analysis of ML algorithm needs
a) Statistical learning theory
b) Computational learning theory
c) None of the above
d) Both a and b

Answer is- d) Both a and b

8)
Identify the difficulties with the k-nearest neighbor algorithm.
a) Curse of dimensionality
b) Calculate the distance of test case for all training cases
c) Both a and b
d) None

Answer is- b) Calculate the distance of test case for all training cases

9)
The total types of the layer in radial basis function neural networks is _____
a) 1
b) 2
c) 3
d) 4

Answer is- c) 3

10)
Which of the following is not a supervised learning
a) PCA
b) Naïve bayes
c) Linear regression
d) KMeans

Answer is- a) PCA

11) What is unsupervised learning?
a) Number of groups may be known
b) Features of groups explicitly stated
c) Neither feature nor number of groups is knownd) None of the above

Answer is- c) Neither feature nor number of groups is known

12) Which of the following is not a machine learning algorithm?
a) SVM
b) SVG
c) Random Forest Algorithm
d) None of the above

Answer is- b) SVG

13) _____ is the scenario when the model fails to decipher the underlying trend in the input data
a) Overfitting
b) Underfitting

c) Both a and b
d) None of the above

Answer is- b) Underfitting

14) Real-Time decisions, Game AI, Learning Tasks, Skill acquisition, and Robot Navigation are
applications of ....
a) Reinforcement learning
b) Supervised learning
c) Unsupervised Learning
d) None of the above

Answer is- a) Reinforcement learning

15) What is called the average squared difference between classifier predicted output and actual
output?
55) What is called the average squared difference between 55classifier
a) Mean relative error
b) Mean squared error
c) Mean absolute error
d) Root mean squared error

Answer is- b) Mean squared error

16) Logistic regression is a .... regression technique that is used to model data having a ....
outcome.
a) Linear, binary
b) Linear, numeric
c) Nonlinear, binary
d) Nonlinear, numeric

Answer is- c) Nonlinear, binary

17) You are given reviews of few netflix series marked as positive, negative and neutral. Classifying
reviews of a new netflix series is an example ofA. supervised learning
B. unsupervised learning
C. semisupervised learning
D. reinforcement learning

Answer is- A. supervised learning

18) Following is powerful distance metrics used by Geometric model
A. euclidean distance
B. manhattan distance
C. both a and b
D. square distance

Answer is- C. both a and b

19) Which of the following techniques would perform better for reducing dimensions of a data set?
A. removing columns which have too many missing values
B. removing columns which have high variance in data
C. removing columns with dissimilar data trends
D. none of these

Answer is- C. removing columns with dissimilar data trends

20) Supervised learning and unsupervised clustering both require which is correct according to the
statement.
A. output attribute.
B. hidden attribute.
C. input attribute.
D. categorical attribute

Answer is- C. input attribute.

21) What is the meaning of hard margin in SVM?
(A) SVM allows very low error in classification
(B) SVM allows high amount of error in classification
(C) Underfitting
(D) SVM is highly flexible

Answer is- (A) SVM allows very low error in classification

22)
Increase in which of the following hyper parameter results into overfit in Random forest? (1). Number
of Trees. (2). Depth of Tree, (3). Learning Rate
(A) Only 1
(B) Only 2
(C) 2 and 3
(D) 1,2 and 3

Answer is- (B) Only 2

23)
Below are the 8 actual values of target variable in the train file: [0,0,0, 0, 1, 1,1,1,1,1], What is the
entropy of the target variable?
(A) -(6/10 log(6/10) + 4/10 log(4/10))
(B) 6/10 log(6/10) + 4/10 log(4/10)
(C) 4/10 log(6/10) + 6/10 log(4/10)
(D) 6/10 log(4/10) – 4/10 log(6/10)

Answer is- (A) -(6/10 log(6/10) + 4/10 log(4/10))

24) Lasso can be interpreted as least-squares linear regression where
(A) weights are regularized with the l1 norm
(B) weights are regularized with the l2 norm
(C) the solution algorithm is simpler

Answer is-(A) weights are regularized with the l1 norm

25) Consider the problem of binary classification. Assume I trained a model on a linearly separable
training set, and now I have a new labeled data point that the model properly categorized and is far
away from the decision border. In which instances is the learnt decision boundary likely to change if I
now add this additional point to my previous training set and re-train? When the training model is,
(A) Perceptron and logistic regression
(B) Logistic regression and Gaussian discriminant analysis
(C) Support vector machine
(D) Perceptron

 Answer is- (A) Perceptron and logistic regression

26) Assume you've discovered multi-collinear features. Which of the following actions do you
intend to take next? (1). Both collinear variables should be removed. (2). Instead of deleting both
variables, we can simply delete one. (3). Removing correlated variables may result in information
loss. We may utilize penalized regression models such as ridge or lasso regression to keep such
variables.(A) Only 1
(B) Only 2
(C) Either 1 or 3
(D) Either 2 or 3

 Answer is- (A) Only 1

27)
A least squares regression study of weight (y) and height (x) yielded the following least squares line:
y = 120 + 5x. This means that if the height is increased by one inch, the weight should increase by
what amount?
(A) increase by 1 pound
(B) increase by 5 pound
(C) increase by 125 pound
(D) None of the above

 Answer is- (B) increase by 5 pound

28)
The line described by the linear regression equation (OLS) attempts to _____?
(A) Pass through as many points as possible.
(B) Pass through as few points as possible
(C) Minimize the number of points it touches
(D) Minimize the squared distance from the points

Answer is- (A) Pass through as many points as possible

29)
For two real-valued attributes, the correlation coefficient is 0.85. What does this value indicate?
(A) The attributes are not linearly related
(B) As the value of one attribute increases the value of the second attribute also increases
(C) As the value of one attribute decreases the value of the second attribute increases
(D) The attributes show a curvilinear relationship

Answer is- (A) The attributes are not linearly related

30)
Which neural network architecture would be most suited to handle an image identification problem
(recognizing a dog in a photo)?
(A) Multi Layer Perceptron
(B) Convolutional Neural Network
(C) Recurrent Neural network
(D) Perceptron

Answer is- (B) Convolutional Neural Network
